

Module 1 – Python Basics

Topics

- Variables & Data Types
- Input/Output
- Operators
- If, Else, Elif
- for Loop
- while Loop
- break
- continue
- pass

Lesson 1 – Variables & Data Types

Definition: A variable is a named memory location used to store data.

Java

```
String name = "Jyoti";  
  
int age = 25;  
  
double salary = 50000.50;  
  
boolean isEmployee = true;
```

Python

```
name = "Jyoti"  
  
age = 25  
  
salary = 50000.50  
  
is_employee = True
```

Interview Takeaways

- Python is dynamically typed.
- Java uses true/false. Python uses True/False.
- Java uses camelCase. Python commonly uses snake_case.

Quiz
